DETAILED ACTION

Election/Restrictions

1. Applicant's election of the species of Figure 21 in the reply filed on 12 August 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 1-5 and 7-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12 August 2004.

Information Disclosure Statement

3. The submission of the PTO-892 forms from application 09/754334 to which the present application properly claims priority is acknowledged. Such a submission, however, is not in proper form, e.g., PTO-1449, to be initialed or lined through by the examiner depending on the consideration of the reference therein. Accordingly, a new PTO-892 form listing all the references cited in the PTO-892 forms from application 09/754334 is hereby included in the instant Office action.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3682

5. Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 6,010,247 to Mouri et al.

Mouri et al. discloses in figure 1, a bearing device comprising a pair of outer races, 12b,13b each having an outer raceway on an inner peripheral surface thereof; a pair of inner races 12a,13a each respectively having an inner raceway on an outer peripheral surface thereof; a plurality of balls 12c,13c rotatably provided between the respective outer raceways and inner raceways; a cylindrical sleeve 9a on which said pair of inner races are fixed; wherein opposing axial end surfaces of respective each of said pair of outer races are abutted to one another; and wherein axial end surfaces of respective each of said pair of inner races are positioned facing one another with a gap therebetween wherein the size of said gap S is adjusted to provide a desired preload to the plurality of balls. See also lines 8-10 of the abstract.

6. Claim 6 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by JP6-235419.
7. Claim 6 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by JP10-318255.
